British Designed and Manufactured

INDESTRUCTIBLE STOVES TO SUIT ANY HOME

The Merlin range of stoves has been carefully designed and crafted to perfection, meeting the ever increasing market demand for a highly efficient and environment friendly home heat source.

The clean and uncomplicated lines of these British designed, unique stoves, defy both contemporary and traditional labels.

Always assured of a welcoming clear view of the fire, these aesthetically pleasing stoves naturally become the focal point in any setting.

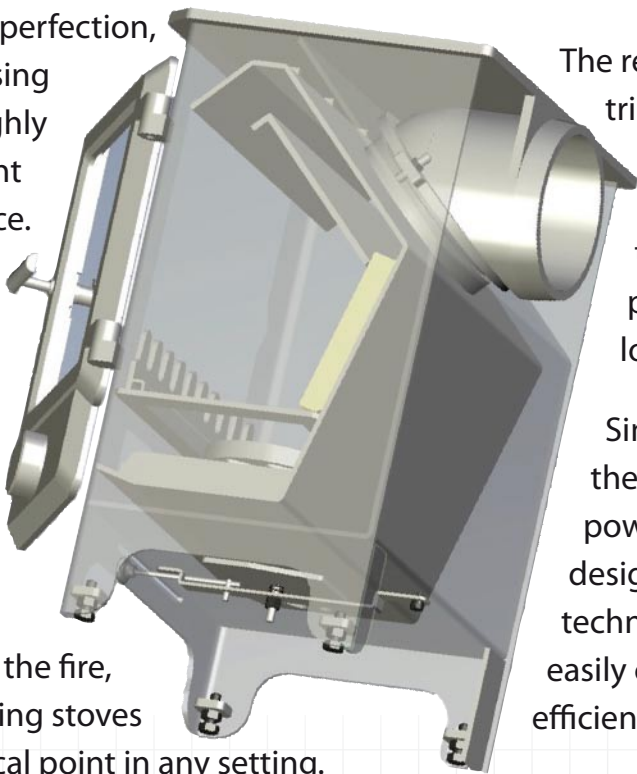

The Merlin Slimline, Slimline Plus and Midline models are approved by DEFRA for use in Smoke Control Areas.

CONSTRUCTION & PERFORMANCE

The revolutionary (patent pending) triple chamber construction and low-draught starting, make the Merlin range unique on the market when it comes to performance, efficiency and low emissions.

Simply elegant on the outside, they are extremely robust and powerful on the inside. Engineer designed, using up to date technology, ensures that these easily controlled stoves run efficiently in all weather conditions.

The newest addition to the range, the Merlin Woodline, is specifically designed to burn wood only.

Rapid Air Movement (RAM) can be achieved in seconds, enabling the instant lighting of the stove. Within moments the firebox can be transformed into a spectacular, unobstructed living flame. RAM ensures clean combustion and clean flames to bring warmth into the room within minutes.

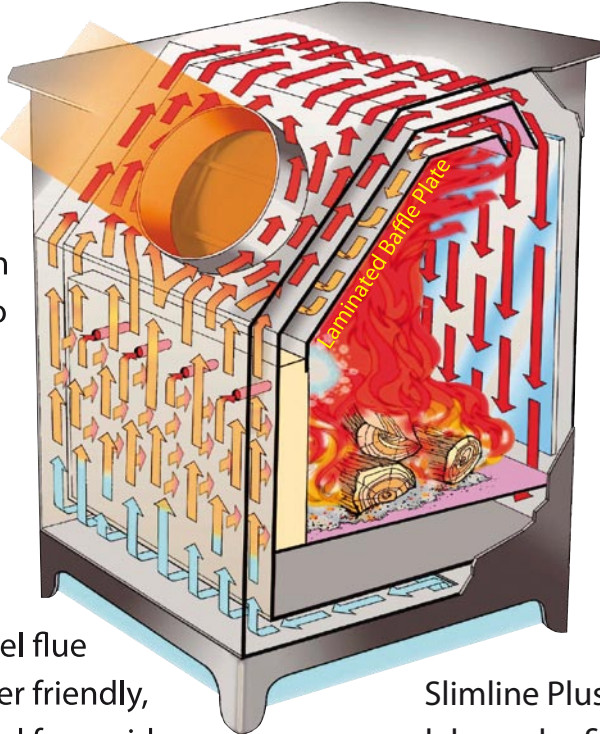

The uniquely engineered baffle plate aids efficiency and keeps the glass clean.

It is easily removed without disturbing the fire bricks.

A warp-resistant, laminated version is available upon request.

All together chimney sweep and environment friendly.

Our single component swivel flue is installer friendly, designed for rapid top or rear exit.

The Slimline, Slimline Plus and Midline models can be fitted with a special adaptor collar to allow use of 125mm flue instead of the standard 150mm flue.
